## **DETAILED ACTION**

#### Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I: Figures 1-3 drawn to a magnetic circuit comprising a rectangular center pole section with squared ends and a single punched upper pole plate with matching rectangular ends.

Species II: Figure 4 drawn to a magnetic circuit comprising a rectangular center pole section with rounded ends and a single punched upper pole plate with matching curved ends.

Species III: Figure 5 drawn to a magnetic circuit comprising a rectangular center pole section with squared ends and two individual rectangular upper pole pieces and no magnetic gap formed at the end of the pole of the center pole.

Species IV: Figure 6 drawn to a magnetic circuit comprising a rectangular center pole section with rounded ends and a single punched upper pole plate and lower pole plate with matching curved inner and outer ends.

Species V: Figure 7 drawn to a magnetic circuit comprising a lower plate divided into two sections and formed by punching and bending a sheet material.

Species VI: Figure 8 drawn to a magnetic circuit comprising a lower plate formed by punching and bending a rolled steel sheet material to form a single lower plate.

Application/Control Number: 10/511,672

Art Unit: 2615

Species VII: Figure 9 drawn to a magnetic circuit comprising a lower plate formed by joining a bar shaped plate having a rectangular cross-section on to a flat plate.

Species VIII: Figure 10 drawn to a magnetic circuit comprising a rectangular center pole section with rounded ends and a single punched upper pole plate with ends bent downward from the upper plate to form a magnetic window.

Species IX: Figure 11 drawn to a magnetic circuit comprising a rectangular center pole section with squared ends and a single punched upper pole plate with ends bent downward from the upper plate and formed with a positioning guide and reinforcement ribs.

Species X: Figure 12 drawn to Species VIII: Figure 10 drawn to a magnetic circuit comprising a center pole section and an upper pole plate with protrusions provided on the perimeter to be embedded in an injection molded frame.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

No claims are deemed generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Each species listed above contains significant and unique structural modifications including: a single rectangular upper pole piece (species I), two individual rectangular upper pole pieces (species III), a single oval upper pole piece (species IV), two individual bent plates forming a lower pole plate (species V) and a rectangular upper pole piece with downwardly bent ends to form a magnetic window (species VIII) for example.

A telephone call was made to Roger Parkhurst on 11/28/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Art Unit: 2615

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Ensey whose telephone number is 571-272-7496. The examiner can normally be reached on Monday - Friday 6:30 AM - 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sinh Tran can be reached on 571-272-7564. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

## Any response to this action should be mailed to:

Commissioner of Patents and Trademarks P.O. Box 1450 Alexandria, Va. 22313-1450

### Or faxed to:

(571) 273-8300, for formal communications intended for entry and for informal or draft communications, please label "PROPOSED" or "DRAFT". Hand-delivered responses should be brought to:

Customer Service Window Randolph Building 401 Dulany Street Arlington, VA 22314 Application/Control Number: 10/511,672 Page 6
